

Employee Management System Using Python

Objective

To develop a Python application to manage employee records efficiently.

Problem Statement

Create a menu-driven system to add, view, search, update, and delete employee details.

Features

- Add Employee
- View Employees
- Search Employee
- Update Employee Details
- Delete Employee Record

Algorithm

1. Start 2. Display menu 3. Accept user choice 4. Perform operation 5. Repeat until Exit 6. Stop

Python Code (Core Logic)

```
employees=[]  
employees.append({'id':101, 'name': 'Sheeba', 'department': 'IT'})  
for emp in employees:  
    print(emp)
```

Sample Input

ID:101 Name:Sheeba Department:IT

Sample Output

```
{'id':101,'name':'Sheeba','department':'IT'}
```

Conclusion

This project demonstrates record management using Python lists, dictionaries, loops, and conditional statements.
