

Password Generator Using Python

Objective

To generate strong and random passwords using Python.

Problem Statement

Create an application that generates secure passwords based on the user's preferred length.

Features

- Random Password Generation
- Custom Password Length
- Uses Letters, Numbers, and Special Characters

Algorithm

1. Start
2. Read password length
3. Generate random characters
4. Display password
5. Stop

Python Code (Core Logic)

```
import random, string
chars=string.ascii_letters+string.digits+string.punctuation
password=''.join(random.choice(chars) for i in range(8))
print(password)
```

Sample Input

Password Length: 8

Sample Output

A@7kP#2x

Conclusion

This project demonstrates randomization, string handling, and secure password generation in Python.
