

ATM Management System Using Python

Objective

To develop a menu-driven ATM system that simulates basic banking operations.

Problem Statement

Create an ATM application that verifies a PIN and allows users to check balance, deposit money, withdraw money, and exit.

Features

- PIN Verification
- Balance Enquiry
- Deposit Money
- Withdraw Money
- Exit Option

Algorithm

1. Start
2. Verify PIN
3. Display menu
4. Perform selected operation
5. Repeat until Exit
6. Stop

Python Code (Core Logic)

```
balance=5000
pin='1234'
if input('Enter PIN: ')==pin:
    print('1.Balance 2.Deposit 3.Withdraw')
else:
    print('Invalid PIN')
```

Sample Input

PIN: 1234
Choice: Balance

Sample Output

Available Balance: ₹5000

Conclusion

This project demonstrates conditional statements, loops, variables, and user interaction in Python.
