

Student Management System Using Python

Objective

To develop a Python application that manages student records efficiently.

Problem Statement

Create a menu-driven system to add, view, search, update, and delete student records.

Features

- Add Student
- View Students
- Search Student
- Update Student Details
- Delete Student Record

Algorithm

1. Start
2. Display menu
3. Read user choice
4. Perform requested operation
5. Repeat until Exit
6. Stop

Python Code (Core Logic)

```
students=[]
students.append({'id':1, 'name':'Alice', 'marks':95})
for s in students:
    print(s)
```

Sample Input

ID: 101
Name: Sheeba
Marks: 92

Sample Output

```
{'id': 101, 'name': 'Sheeba', 'marks': 92}
```

Conclusion

This project demonstrates Python lists, dictionaries, loops, and menu-driven programming for managing records.
