

Library Management System Using Python

Objective

To develop a Python application for managing books and library records efficiently.

Problem Statement

Create a menu-driven program that allows users to add books, view books, search books, issue books, return books, and delete book records.

Features

- Add Book
- View Books
- Search Book
- Issue Book
- Return Book
- Delete Book

Algorithm

1. Start
2. Display menu
3. Read user choice
4. Perform selected operation
5. Repeat until Exit
6. Stop

Python Code (Core Logic)

```
books=[]
books.append({'id':101,'title':'Python Basics','author':'John'})
for book in books:
    print(book)
```

Sample Input

Book ID: 101
Title: Python Basics
Author: John

Sample Output

```
{'id': 101, 'title': 'Python Basics', 'author': 'John'}
```

Conclusion

This project demonstrates the use of Python lists, dictionaries, loops, and menu-driven programming to manage library records.
