

Number Guessing Game Using Python

Objective

To develop a Python game where the user guesses a randomly generated number.

Problem Statement

Create a number guessing game that generates a random number and gives hints until the correct number is guessed.

Features

- Random Number Generation
- User Input Validation
- Higher/Lower Hints
- Attempt Counter

Algorithm

1. Start
2. Generate a random number
3. Read user's guess
4. Compare the guess
5. Display hint or success message
6. Repeat until guessed correctly
7. Stop

Python Code (Core Logic)

```
import random
number=random.randint(1,100)
guess=int(input('Guess: '))
if guess==number:
    print('Correct!')
elif guess<number:
    print('Too Low')
else:
    print('Too High')
```

Sample Input

Guess: 45

Sample Output

Too Low

Conclusion

This project demonstrates the use of random number generation, conditional statements, loops, and user interaction in Python.
